

AFRIGEN Link

FIELD MANUAL • GROUND FORCE

You are the moat.

The operating manual for AFRIGEN Link field inspectors and border liaison agents — the physical layer of trust that no software competitor can copy.

INTERNAL • GROUND FORCE ONLY

CONTENTS

What's inside

01	Your role	Why boots on the ground win
02	Your dashboard	Inspections, audits & logs
03	Yard audit	Mechanical & legal verification
04	Document check	Matching papers to the machine
05	Sign off & advance	Releasing the gate
06	Border liaison	OSBP crossings & portal stalls
07	Standards & integrity	Non-negotiables

WHY YOU MATTER

Every passive marketplace failed because nobody verified the real world. You do. A signed-off inspection is the difference between a confident client and a wired-away fortune.

01 • YOUR ROLE

Boots on the ground

You sit between the supplier's promise and the client's money. Your verification unlocks the funding step — so your judgement protects real capital. Two roles operate in the Ground Force:

Field Inspector

On-site mechanical and legal yard audits. You confirm the asset is real, sound, and matches its documents before escrow is funded.

Border Liaison

Stationed at corridor OSBPs (Tunduma, Namanga, Rusumo). You manually resolve portal failures and bureaucratic stalls that software can't.

THE PRINCIPLE

AFRIGEN Link never lets a deal advance on trust alone. Your physical sign-off is a hard gate — the contract cannot move to funding without it.

02 • YOUR DASHBOARD

Inspections, audits & logs

1

Inspections queue

Your home view lists tenders awaiting inspection — assets at the **Machine docs uploaded** stage, ready for your visit.

2

Open an inspection

Tap a job to see the supplier's uploaded documents, the asset details and the client's requirement.

3

Yard Audits

A running log of every audit you complete — your record of work and a reference for repeat suppliers.

4

Border Log

Where liaison agents record OSBP crossings, wait times and clearance notes.

ON THE YARD

Trust is verified in person, not on a screen

03 • YARD AUDIT

Mechanical & legal verification

Run the same disciplined check every time. Consistency is what makes our verified badge mean something.

- ✓ **Asset identity** – VIN / chassis / registration matches the listing and the uploaded papers.
- ✓ **Mechanical condition** – engine, hydraulics, tyres/tracks, lights, brakes. Note any fault.
- ✓ **Capacity & spec** – the machine genuinely meets the client's stated requirement.
- ✓ **Legal standing** – ownership, insurance and inspection papers are valid and current.
- ✓ **Yard legitimacy** – the supplier operates a real, traceable yard, not a paper front.

RECORD EVERYTHING

Enter the VIN, your findings and a clear pass/fail note. If anything is off, do not sign off – flag it. A blocked deal is cheaper than a failed one.

04 • DOCUMENT CHECK

Matching papers to the machine

The supplier uploaded fleet documents at the previous stage. Your job is to confirm the paper and the steel are the same thing.

CHECK	WHAT YOU'RE CONFIRMING
Registration	Plate / chassis on the document = plate / chassis on the asset
Ownership	The supplier on the platform is the lawful owner or authorized operator
Insurance	Cover is active and appropriate for the work and route
Fitness	Inspection / fitness certificate is valid and unexpired
Capacity	Rated capacity supports the client's load or task

IF DOCUMENTS DON'T MATCH

Stop. Record the discrepancy in your inspection notes and leave the gate closed. Escalate to admin. The supplier corrects and re-submits before you re-inspect.

05 • SIGN OFF & ADVANCE

Releasing the gate

1

Confirm the inspection

Tick that the on-site inspection passed and enter the VIN and your notes.

REQUIRED

2

Verify & advance

Submitting your sign-off advances the contract from **Machine docs uploaded** to **Field verified** — and only then can the client move to permits and payment.

STAGE: FIELD VERIFIED

3

Your audit is logged

The completed audit appears in your Yard Audits history with a timestamp, forming the permanent record.

YOU ARE A HARD GATE

Nothing financial happens before your sign-off. Take the time to get it right — there is no pressure to rush a pass.

06 • BORDER LIAISON

OSBP crossings & portal stalls

Cross-border jobs run through One-Stop Border Posts on three corridors. When portals fail or paperwork stalls, you resolve it in person — that's the service software can't deliver.

Southern

Tunduma → into Zambia

Central

Toward Rwanda & Burundi

Northern

Namanga → toward Kenya

Log it

Record OSBP, wait time and a clearance note for every crossing

Border Log entry

For each crossing, select the OSBP, enter the wait time in hours, and write a clearance note describing what was processed or what stalled. This builds the corridor intelligence that makes our routing reliable over time.

07 • STANDARDS & INTEGRITY

Non-negotiables

- ✓ **Verify in person, always.** Never sign off remotely or on a supplier's word.
- ✓ **Document the truth.** Your notes are a legal-grade record — accurate, specific, dated.
- ✓ **No incentive to pass.** You are paid to be right, not to be fast. A fail protects the platform.
- ✓ **Independence.** You work for AFRIGEN Link and the integrity of the deal — never for the supplier.
- ✓ **Escalate doubt.** If something feels wrong, leave the gate closed and tell admin.

THE GROUND FORCE CREED

We are the reason a buyer three countries away can wire money with confidence. The platform is the promise — **we are the proof.**
